                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Submitted (31-OCT-2002) Whitehead Institute/MIT Center for Genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              All repeats were identified using RepeatMasker: Smit, A.F.A. & Green, P. (1996-1997)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 NOTE: This is a 'working draft' sequence. It currently consists of 5 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Summary Statistics

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Emm: EMBL; Sw:, SWISSPROT; Tr:, TREMEL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C elegans/wormpep Repeat names beginning 'Dr' were identified by The Recon repeat discovery system (Zhirong Bao and Sean Eddy, submitted), and those beginning 'drr' were identified by Rick Waterman (Stephen Johnson lab, WashU). Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequences similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Direct Submission

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are esequenced and submitted once, so the sequence for the remainder the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 of Molecular and Human

                                                                                                                                                                                                                                                                                 QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found
                                                                                                                                                                                                                                                                                                                                                                                                        SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Submitted (15-MAR-2003) Human Genome Sequencing of Molecular and Human Genetics, Baylor College Baylor Plaza, Houston, TX 77030, USA 9 (bases 1 to 126716)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Worley, K.C.

Where this is found the longest good quality representation will be submitted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml

NOTE: This is a 'working draft' sequence. It currently consists of 37 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Quality coverage: 3.4 in Q20 bases; agarose-fp Quality coverage: 3.6 in Q20 bases; sum-of-contigs

The SGS3 gene is essential for post-transcriptional inactivation (degradation of RNA) and for resistance to viruses. Overexpression of SGS3 results in plants with increased resistance to viruses, while inactivation of SGS3 in transgenic plants (e.g. by viruses, while inactivation of SGS3 in transgenic plants (e.g. by expressing antisense RNA, by mutation or by homologous recombination) expresses the level of the transgene product. This product may e.g. increases the level of the transgene product or pathogens), alter contents o impart resistance (to herbicide, insects or pathogens), alter contents o essential fatty acids or proteins, or is pharmaceutically active, e.g. a immunoglobulin or interferon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New SGS3 gene from Arabidopsis thaliana, useful for increasing virus resistance in plants and, when inhibited, for increasing transgene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Beclin C,

The SGS3 gene is essential for post-transcriptional inactivation of (degradation of RNA) and for resistance to viruses. Overexpression of (SGS3 results in plants with increased resistance to viruses, while sinactivation of SGS3 in transgenic plants (e.g. by expressing antisense inactivation of SGS3 in transgenic plants (e.g. by expressing antisense RNA, by mutation or by homologous recombination) increases the level of the transgene product. This product may e.g. impart resistance (to the transcent product or pathogens), alter contents of essential fatty acids herbicide, insects or pathogens), alter contents of essential fatty acids or proteins, or is pharmaceutically active, e.g. an immunoglobulin or interferon.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Arabidopsis thaliana
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PCR primer
                                                                                          PCR primers AAF25371-72 were used to amplify cDNA encoding an Arabidopsis thaliana SGS3 polypeptide. The SGS3 gene is essential for post-transcriptional inactivation (degradation of RNA) and for resistance to viruses. Overexpression of SGS3 results in plants with increased viruses, while inactivation of SGS3 in transgenic plants resistance to viruses, while inactivation or SGS3 in transgenic plants (e.g. by expressing antisense RNA, by mutation or by homologous (e.g. impart resistance (to herbicide, insects or pathogens), alter may e.g. impart resistance (to herbicide, insects or pathogens), alter contents of essential fatty acids or proteins, or is pharmaceutically active, e.g. an immunoglobulin or interferon
                                                                                                                                                                                                                                          New SGS3 gene from Arabidopsis thaliana, useful for increasing virus resistance in plants and, when inhibited, for increasing transgene expression.
                                                                                                                                                                                                                                                                                                                                                                  16-JUL-1999; 99FR-00009417.

The SGS3 gene is essential for post-transcriptional inactivation (degradation of RNA) and for resistance to viruses. Overexpression of SGS3 results in plants with increased resistance to viruses, while inactivation of SGS3 in transgenic plants (e.g. by expressing antisense RNA, by mutation or by homologous recombination) increases the level of the transgene product. This product may e.g. impart resistance (to herbicide, insects or pathogens), alter contents of essential fatty acids or proteins, or is pharmaceutically active, e.g. an immunoglobulin or interferon
Human; ds; bisulphite treatment; CpG; DNA methylation; cancer; tu cytostatic; ALDH6; CYP11A; CYP11B1; CYP3A3; DPYD; EPHX2; OCLN; TX UGT8; MRP; pharmacogenomics; SNP; single nucleotide polymorphism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 23 BP; 6 A; 4 C; 7 G; 6 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Example 1; Page 22; 36pp; French.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New SGS3 gene from Arabidopsis thaliana, useful for increasing virus resistance in plants and, when inhibited, for increasing transgene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Beclin C,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            16-JUL-1999; 99FR-00009417.

Human chemically modified disease associated gene SEQ ID NO 117.

```
The invention relates to a nucleic acid comprising a sequence at least 18 CC bases in length of a segment of the chemically pretreated DNA of genes CC associated with pharmacogenomics according to one of the sequences of the Genes ALDH6 (NM 000693), CYP11A (NM 000781), CYP11B (NM 000781), CYP1B1 (NM 000781), CYP1B1 (NM 000781), CYP1B1 (NM 000781), CYP1B1 (NM 0019079), CCLN (NM 0019076, and NM 017460), DPYD (NM 001010), EPHX2 (NM 001979), CCLN (CC (NM 001990), NM 019901, NM 019902, NM 019862, NM 019898, NM 019899) and CC (NM 019900, NM 019901, NM 019902, NM 019862, NM 019898, NM 019899) and CC treatment to convert cytosines (but not methyl-cytosines) into uracils. CC peptide nucleic acid (PNA)-oligomer, Comprising in each case at least one CC base sequence having a length of 9 nucleotides which hybridises to or is cidentical to a chemically pretreated DNA of genes associated with CC pharmacogenomics and their complements, arranged in an array for CC analysing diseases associated with the methylation state (CpG) and/or detecting SNPs (single nucleotide polymorphisms) of the 87 sequences. The CC cligomers may also be used as PCR primers. The set of 87 nucleic acids cand their complement is useful for diagnosis and therapy of solid CC and their complement. Note: The sequence data for this patent did cnot form part of the printed specification, but was obtained in CC electronic format directly from WIPO at CC format dir

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC sequences (ABN79984 ABN80333) or their complements. The invention is Sequences (ABN79984 ABN80333) or their complements. The invention is CC useful for the diagnosis or therapy of diseases associated with CC useful for the diagnosis or therapy of diseases associated with SC genes (HOX), like diabetes, cancer, apoptosis related to homeobox containing CC development genes, in particular disease related to homeobox containing CC associated with congenital heart disease, epilepsy, diseases related to CC associated with congenital heart disease, epilepsy, diseases related to CC distone deacetylation, Currarino syndrome, diseases related with the CC disjomers specific to each of the genes are useful for detecting the CC oligomers specific to each of the genes are useful for detecting the CC (II) and their complementary sequences, as primer oligonucleotides for the amplification of the 350 sequences, (II) and/or their complements and CC the amplification of the 350 sequences, (II) and/or their complements and complements and complements and complements for detecting the cytosine methylation state and/or CC single nucleotide polymorphisms (SNPs). Note: The sequence data for this catenate did not form part of the printed specification but is based on CC gatent did not form part of the printed specification but is based on CC sequence information supplied to Derwent by the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                           complementary to (Ss). The nucleic acid may be a peptide nucleic aci oligomer (PNA) of at least 9 nucleotides and may form part of a set
                                                                     The invention relates to a nucleic acid comprising a sequence of 18 bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with bisulphite, of genes associated with tumour suppression and oncogenes having a sequence taken from 536 (actually 533 since numbers 408, 458 at 500 are missing from the sequence listing) sequences (Ss) and sequences
                                                                                                                                                                                                                                         Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAS46448
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         methylation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cytosine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cc diseases associated with CpG dinucleotides e.g. cancers and tumours. The CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The CPG probes can also be used in a method for ascertaining genetic and/or CC epigenetic parameters for the diagnosis and/or therapy of existing CC epigenetic parameters for the diagnosis and/or therapy of existing CC epigenetic parameters in the pecific diseases, by analysing CC epigenetic and/or epigenetic parameters may be compared to another set of CC epigenetic and/or prognosis events which are disadvantageous to CC epigenetic and/or prognosis events which are disadvantageous to CC epigenetis. The present sequence is one of the 53 genomic sequences CC patients. The present sequence is one of the 53 genomic sequences CC epigenetis. The present sequence (e.g. ID 2 and ID), ID 536 and ID CC corresponding odd numbered sequence (e.g. ID 2 and ID), ID 536 and ID CC corresponding odd numbered sequence (e.g. ID 2 and ID). Note: The CC 535, except for those whose partner sequence is missing). Note: The Sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO appecification, int/mih/mihlished not sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 11

                                                                                                                                                                                                                                                                                                                                                                                                                          03-JAN-2002
The invention relates to a nucleic acid (I) comprising a sequence at least 18 bases in length of a segment of chemically pretreated DNA (I) least 18 bases in length of a segment of chemically pretreated in of genes associated with development selected from 87 genes listed in specification such as ACCPN, ADFN, or AFD1 and comprising one of 350 sequences (ABN79984-ABN80333) or their complements. The invention is
                                                                                                                                                       Novel nucleic acid useful for diagnosis and therapy of diseases associated with development genes such as diabetes, comprises a sequence of a segment of chemically pretreated DNA of genes associated with
                                                                                                                                                                                                                                                                                                                                    30-JUN-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC development genes, in particular disease related to homeobox containing CC development genes, in particular disease related to homeobox containing CC genes (HOX), like diabetes, cancer, apoptosis related diseases, syndromes CC genes (HOX), like diabetes, cancer, apoptosis related diseases, epiteps, diseases related to CC associated with congenital heart disease, epilepsy, diseases related to CC histone deacetylation, Currarino syndrome, diseases related with the CC dispoment of the brain and limb girdle muscular dystrophy and dwarfism. CC coligomers specific to each of the genes are useful for detecting the CC oligomer specific to each of the genes are useful for detecting the CC injunction of the all CpG dinuclectides within the 350 sequences or CC (II) and their complementary sequences, as primer oligonuclectides for the amplification of the 350 sequences, (II) and/or their complements and CC as oligomer probes for detecting the cytosine methylation state and/or CC single nuclectide polymorphisms (SNPs). Note: The sequence data for this CC sequence information supplied to Derwent by the European Patent Office

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 06-NOV-2003
The invention relates to recombinant carcinoma associated (CA) nucleic acid sequences from mouse and human (ADA01482-ADA03094), and to recombinant carcinoma associated proteins (CAP) encoded by them. The recombinant carcinoma associated proteins (CAP) encoded by them. The invention also encompasses expression vectors and host cells comprising a invention also encompasses expression vectors and host cells comprising CA nucleic acid or binds to the protein, and a biochip comprising CA nucleic acid or binds to the protein, and a biochip comprising CA nucleic acid or binds to the protein, and a biochip comprising CA nucleic acid or organism oncogenic retroviruses, which insert into the genome of the host organism oncogenic retroviruses, which insert into the genome of the host organism oncogenic trans-acting viral genes, meaning that cancer incidence is a pathogenic trans-acting viral genes, meaning that cancer incidence is a pathogenic trans-acting viral genes, meaning that cancer incidence is a pathogenic trans-acting viral genes, meaning that cancer incidence is a pathogenic trans-acting viral genes, meaning that cancer incidence is a pathogenic trans-acting viral genes, meaning that cancer incidence is a pathogenic trans-acting viral genes of proviral integration into host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  26-DEC-2001; 2001US-00035832.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       26-DEC-2002; 2002WO-US041414.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     17-JUL-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WO2003057146-A2

CA nucleic acids, proteins and antibodies are also useful as therapeutic agents and in screening and evaluating drug candidates. The present sequence represents a specifically claimed human CA nucleic acid sequence of the invention. Note: The complete sequence data for this pattent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      02-MAR-2001; 2001US-00798586.

                                                                                                                                                                               nucleotide sequence selected from any of the 660 sequences fully defined in the specification. A polynucleotide of the invention has cytostatic activity, and may have a use in gene therapy, or in a vaccine. The recombinant nucleic acids and polypeptides are useful for treating carcinomas, e.g. lymphomas, cancers, neoplasm, adenocarcinoma, and sarcomas. The present sequence represents a human gene of the invention.

                                                                                                                                                                                                                                                                                                                                                                The invention relates to a recombinant nucleic acid comprising a nucleotide sequence selected from any of the fully defined carcinoma-associated (CA) genes from the 50 tables given in the specification. The CA proteins are secreted, transmembrane or intracellular proteins. The recombinant nucleic acids are useful for screening for drug candidates for diagnosing or treating carcinomass. Sequences given in ADC85215-ADC85514 represent CA genes of the invention.
